RUMEN AID

RUMEN AID is a specialised nutritional supplement formulated to enhance rumen function and overall digestive health in ruminants. It supports microbial activity, regulates rumen pH, boosts metabolism, and stimulates appetite, especially during periods of stress or recovery.

Key Benefits:

- **Enhanced Rumen Performance:** Supports the growth and activity of beneficial rumen microflora, helping to stabilise rumen function and improve feed digestibility.
- **Vitamins for Vital Functions:** Formulated with a comprehensive blend of vitamins A, D3, E, C, and B-group vitamins. B vitamins have a crucial role in stimulating rumen microbes, enhancing liver function, and supporting appetite, particularly post-calving. Vitamins E and C contribute to antioxidant defence and immune support.
- **Buffer and Energy Source:** Acts as an effective buffer to help regulate rumen pH and serves as a valuable energy source for optimal metabolic function.
- **Unique blend of Yeast:** A combination of probiotic (live) and postbiotic (inactive) yeast components. Live yeast rapidly removes oxygen from the rumen, promoting anaerobic fermentation, while inactive yeast supports microbial balance, and together they support digestion and volatile fatty acid (VFA) production.

Versatile Administration:

RUMEN AID is easy to integrate into various feeding systems. It can be administered via:

- Drinking water
- Oral drench
- Top-dressed with concentrated feed

Recommended Use Cases:

- As appetite support during veterinary treatment or illness
- For cows experiencing rumen imbalances, including acidosis
- Post-calving recovery to stimulate appetite and microbial function
- As a daily supplement to enhance rumen microflora and digestive health

Feeding Instructions

- **Post-Calving Support:**
- Administer **1 sachet (200 g)** of **RUMEN AID** immediately after calving to promote appetite, support recovery, and enhance rumen health.
- **Recovery from Surgery or Veterinary Treatment:** For large ruminants undergoing recovery, administer **1 sachet (200 g)** daily for 2 consecutive days.
- **Loss of Appetite in Dairy Cows or Large Cattle:** Feed **1 sachet (200 g)** daily and repeat the process for 2-3 days until normal appetite resumes.
- **Adult Sheep and Goats:** 30g a day for a week
